

Introducing the Provider Search Tool

UCare is committed to providing information and tools that are quicker, easier and more intuitive to use. In May, we introduced several improvements to UCare.org/providers with a new design, helpful ways for providers to look at benefit and prior authorization information, and other enhancements.

Coming soon, there will be a new search tool that will help members find providers in their network.

Highlights include:

- Searching for people, places and pharmacies in one convenient location.
- Results presented to the user in a clearer format.
- A feature that allows users to view selected results side-by-side – for example to compare providers’ distance from home, what specialties they offer and what languages they speak.
- The ability for members to print the results of their search or send them via email.

We are also working on a formulary search to be released later this year.

We hope that it will be even easier now for members to find the providers that are just right for them – so that together we can partner to provide UCare members the highest quality service.
